

370z| Cars and Coffee

1. Screenshots of all views of your application displayed in your browser.

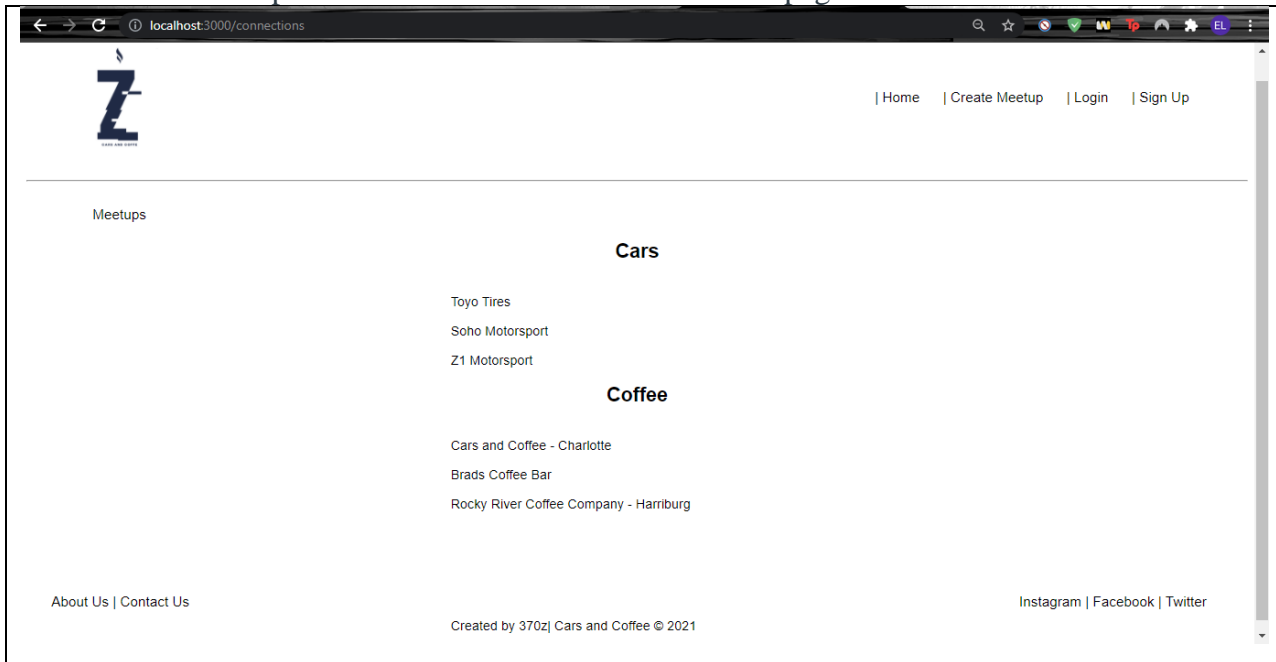

- This is my homepage, I had to zoom out a bit and still couldn't fit the entire page if you scroll you will be able to see the about and contact page when you open my site.

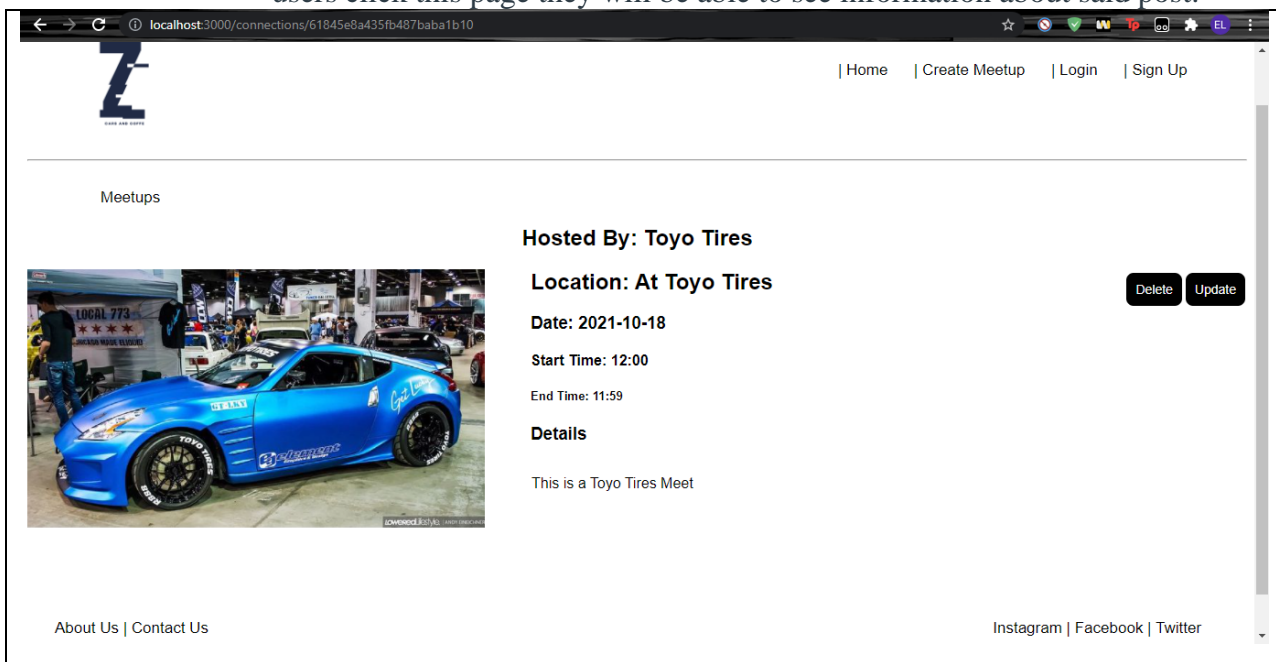

- This is my connections/new where users can submit a new connection, I had to zoom out a bit and still couldn't fit the entire page if you scroll you will be able to see the about and contact page when you open my site

- This is my /connections page, this page shows 2 different topics and their sub posts. I had to zoom out to fit the entire page.

- This is my connections/61845e8a435fb487baba1b10 (Toyo Tires) page, if users click this page they will be able to see information about said post.

- This is my connections/61845e8a435fb487baba1b10 (Toyo Tires) page after user clicks update, when a user is done making changes they can click submit to save changes. I had to zoom out so nav bar and foot page is available to view if you scroll.

- This is my connections when there are no connections available to view.

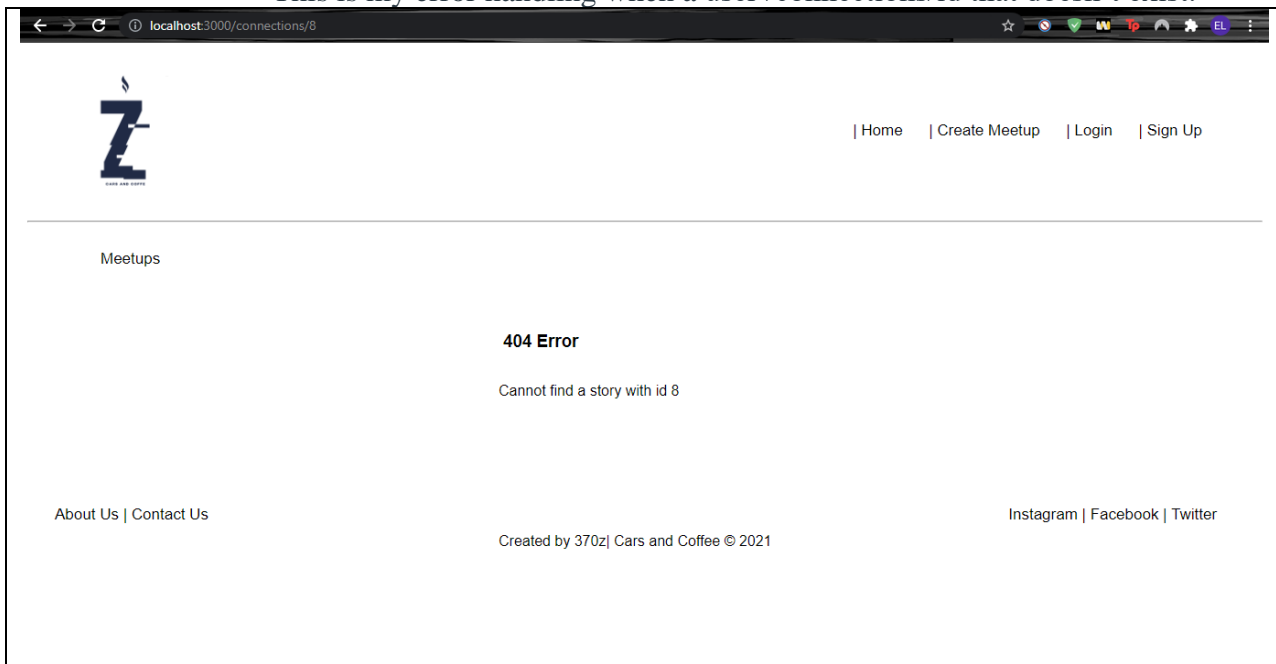

- This is my error handling when a user enters a page that doesn't exist or when the id is not 24bit.

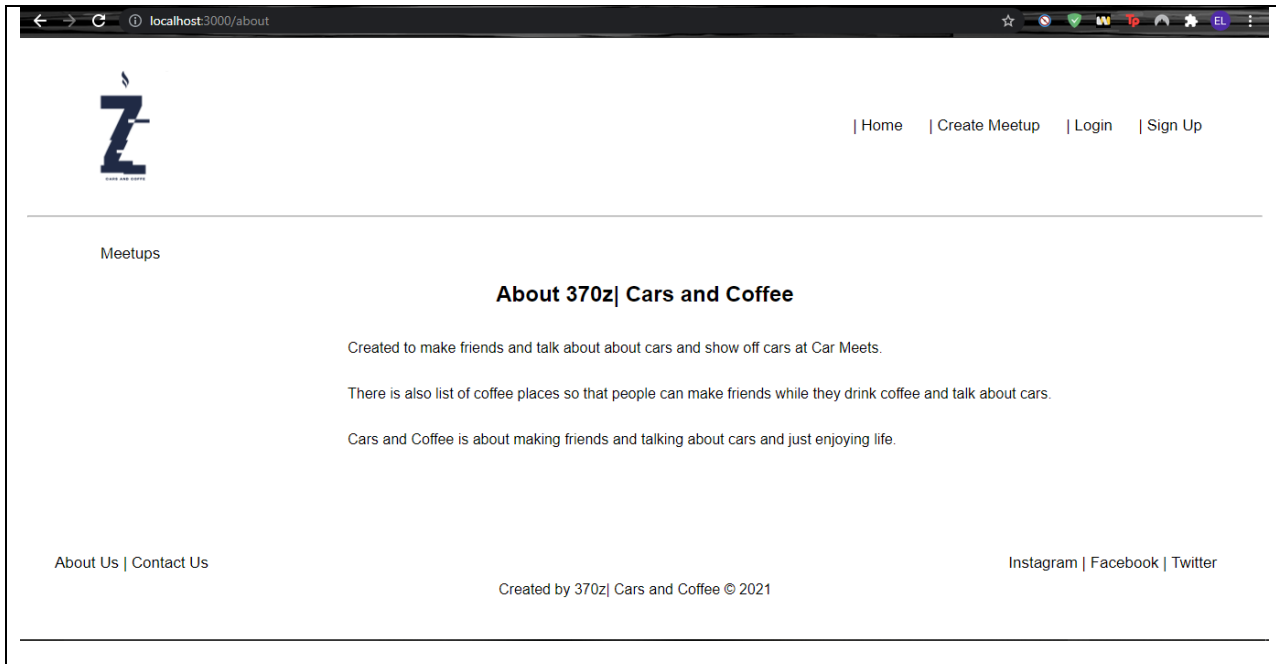

- This is my error handling when there is an internal error/ something wrong with code.

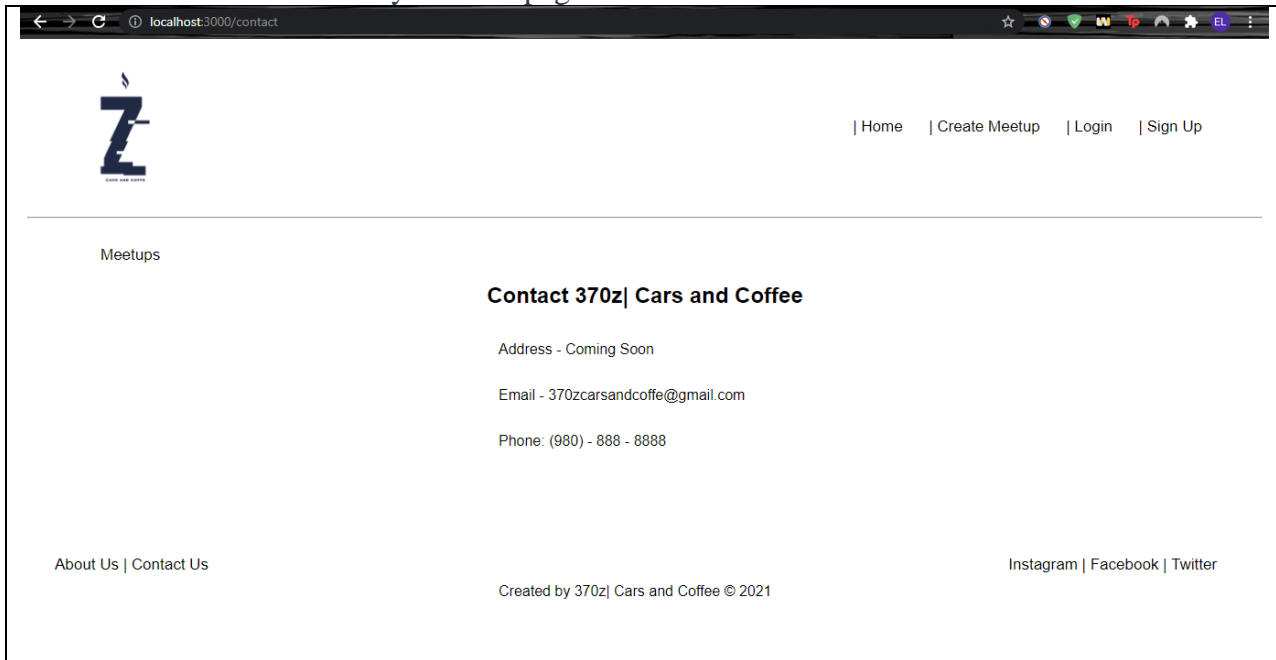

- This is my error handling when a user /connections/id that doesn't exist.

- This is my /about page.

- This is my /contact page

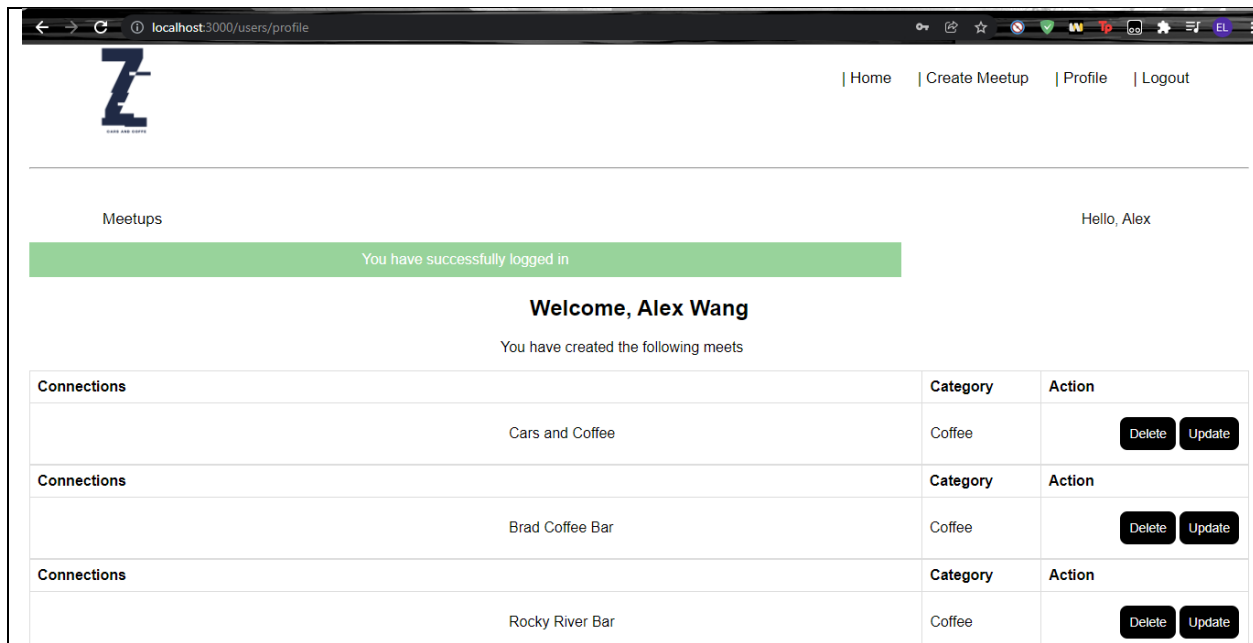

- This is my login page

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/users/login'. The page features a logo on the top left, navigation links ('Home', 'Sign Up', 'Login') on the top right, and a 'Meetups' section on the left. The main content area is titled 'Hello, Guest' and contains a login form with fields for 'Email Address' (containing 'example@gmail.com') and 'Password' (containing 'password'). A 'Login' button is positioned below the password field. At the bottom, there are links for 'About Us' and 'Contact Us', a copyright notice 'Created by 370z| Cars and Coffee © 2021', and social media links for 'Instagram', 'Facebook', and 'Twitter'.

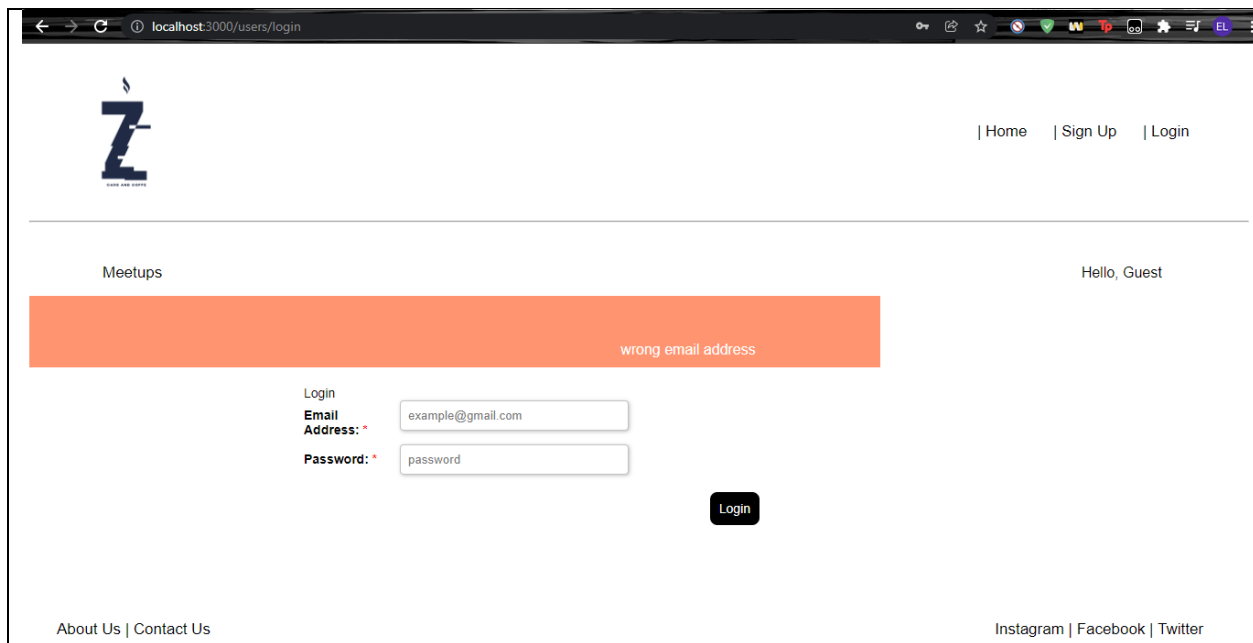

- This is my Sign-up page which can be accessed at /users/new

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/users/new'. The page layout is consistent with the login page, featuring the same logo, navigation links, and 'Meetups' section. The main content area is titled 'Hello, Guest' and contains a sign-up form with fields for 'First Name', 'Last Name', 'Email Address' (containing 'example@gmail.com'), and 'Password'. A 'Sign Up' button is positioned below the password field. The footer includes links for 'About Us' and 'Contact Us', the copyright notice 'Created by 370z| Cars and Coffee © 2021', and social media links for 'Instagram', 'Facebook', and 'Twitter'.

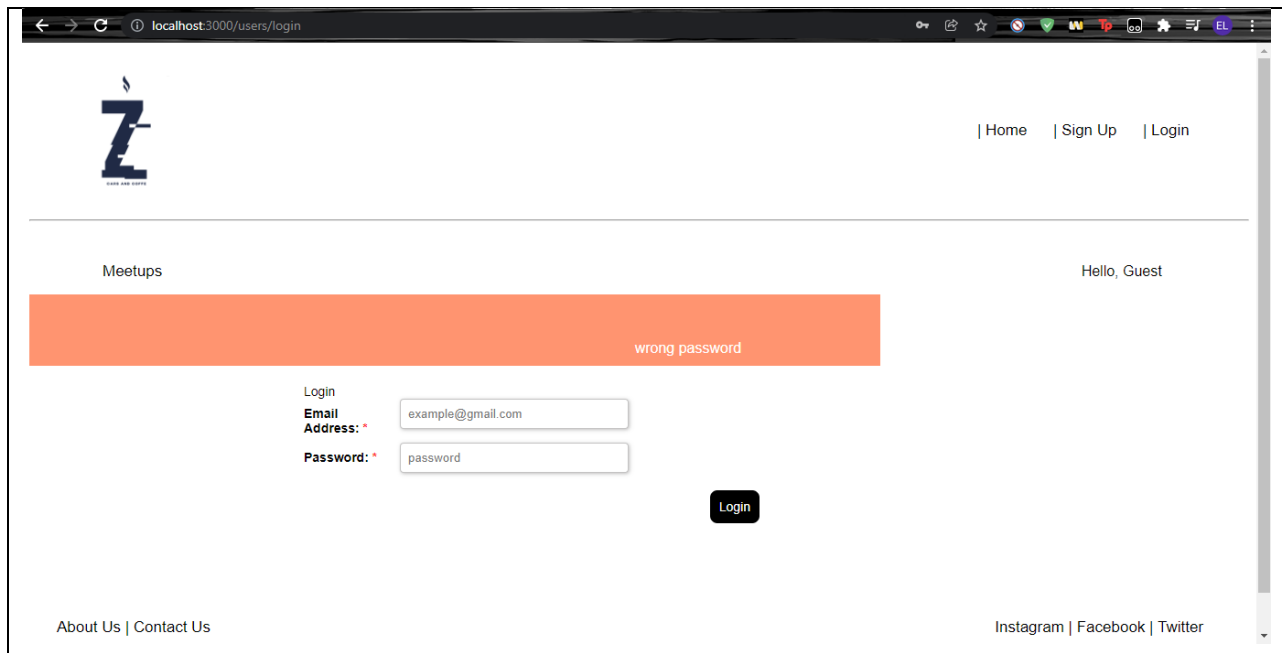

- After you successfully login you're redirected to the profile page, with the list of connections the user has created

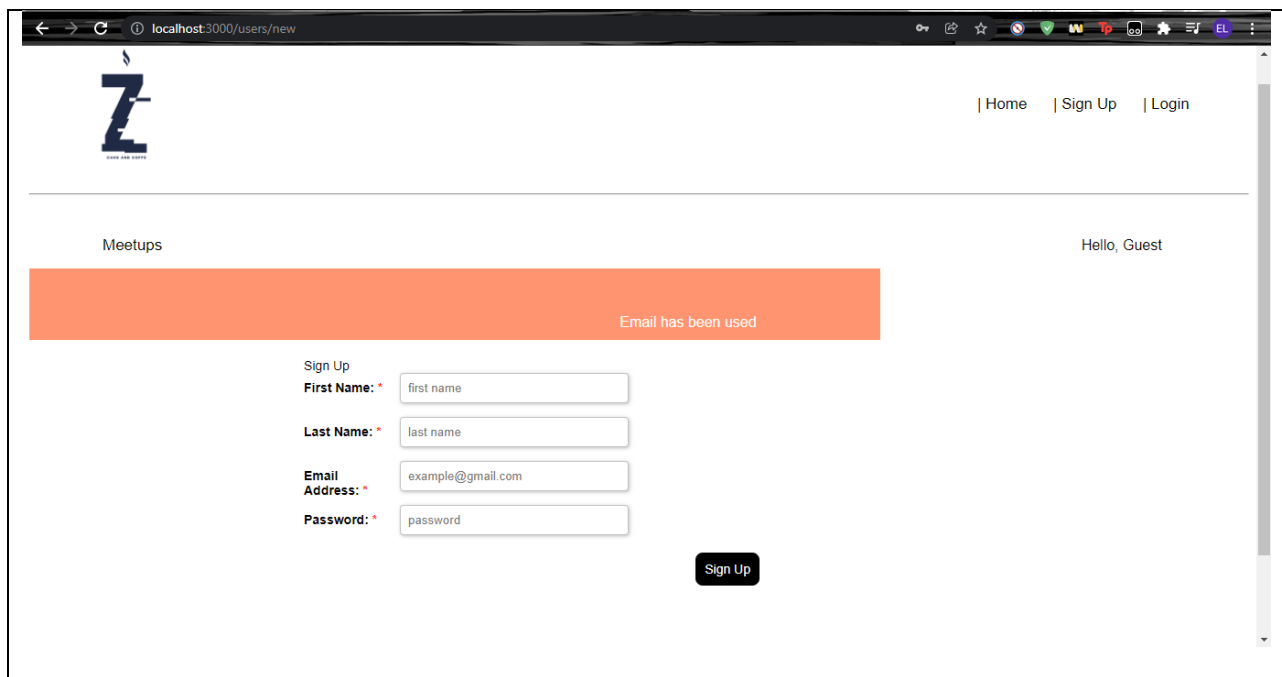

- This is wrong email error message

- This is wrong password error message

- This is my error handling for duplicate email signup which redirects the user back to the signup page.

- This is my improved error handling which sends an error notification and redirects user back to the previous page if mongoose validation fails

Meetups Hello, Alex

2. No additional features as of now, I plan to add some later on maybe make it look a little prettier.
3. Everything should be complete, project 4 is officially complete, and everything that was required should also be complete.
4. Project 4 was fairly simple; integration of the user was fairly simple. However, the hardest part of this project was making the site more dynamic and including users name in the header, that took me a while to implement. Implementing user methods was also tricky but after a while I was able to figure out what methods I needed. User authorization was also difficult and including flash messages for the ease of the user took me a while to understand but I eventually got the hang of it. I would say the hardest part was making the site dynamic because you constantly had to switch from guest to an actual user which got irritating but it was satisfying at the end when you got everything to work.
