# 370z| Car and Coffee
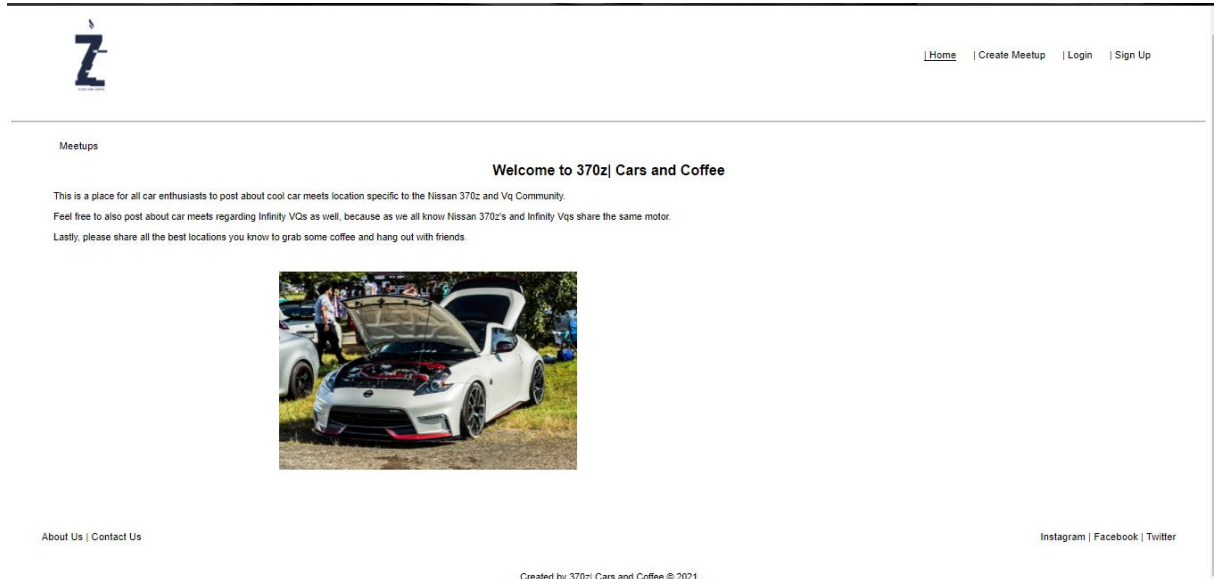

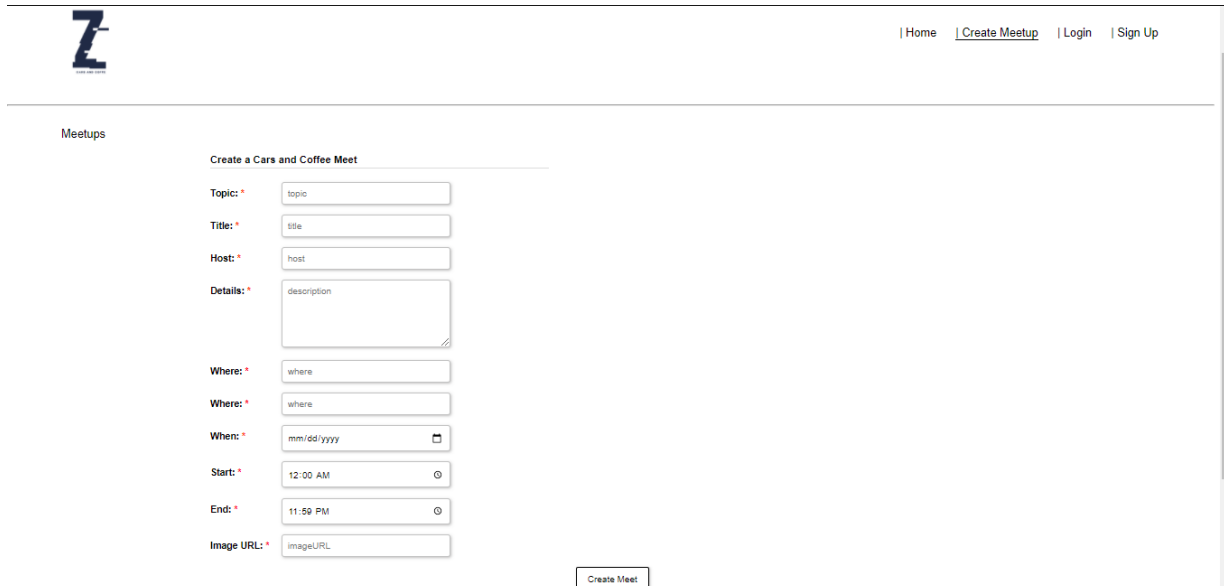

1) A screenshot of each of your application's pages displayed in your browser.

- This is my home page, I had to zoom out to fit everything, but you are able to visit this page by either clicking home, or by clicking the logo.

- This is my Create New connections page otherwise titled create meet up for me because my website is about car meets.

- This is my list of connections titled Meetups for me, it shows a list of car meets and good places to grab a coffee and hang out with friends.

Meetups

### Cars Meets

Toyo Tires - Nissan 370z's and Vq Infinitys

Soho Motorsport - Nissan 370zs

Z1 Motorsport - Nissan 370z's and Vq Infinitys

### Coffe Places

Cars and Coffee - Charlotte

Brad's Coffee Bar - Charlotte

Rocky River Coffee Company - Harrisburg

- After clicking one of the connections or meetups it takes you to the details about the meetup aka my 1 connection used for all for now. In this page you have the option to update or delete the connection along with other details regarding the meet/connection.

2) Explanation of additional features, if any.
- There aren't any additional features for now, except for just simple CSS edits. I plan to add additional features in the future though when we can use JavaScript and bootstrap to customize our website.

3) Explanation of status, stopping point, and issues if incomplete.
   - Everything that was required for this prototype should be complete. I have done everything that was asked.
4) Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?
   - Yes, this was very challenging because in this time and age everyone uses a template and builds off of said template so doing something like this from scratch was definitely challenging for me.  I watched a lot of YouTube videos and tutorials that are in canvas along the way to help and I wasn't sure if we could use JavaScript and bootstrap right away, so I didn't  use that which makes the website look plain right now so I always had this feeling that it didn't look good enough. Hopefully, when we get to add bootstrap and JavaScript, I can make my website look as good as I want it to be.
