# 370z| Cars and Coffee

1. Screenshots of the all views of your application displayed in your browser.

- This is my homepage, I had to zoom out a bit and still couldn't fit the entire page if you scroll you will be able to see the about and contact page when you open my site.

- This is my connections/new where users can submit a new connection, I had to zoom out a bit and still couldn't fit the entire page if you scroll you will be able to see the about and contact page when you open my site
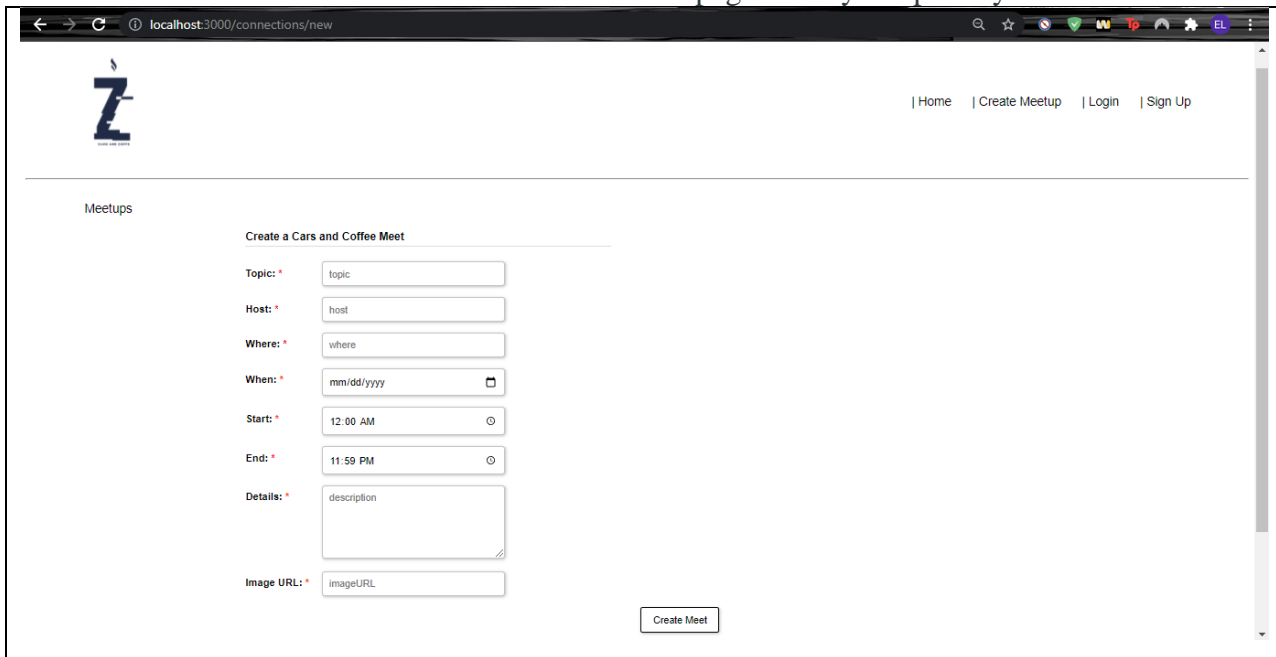

- This is my /connections page, this page shows 2 different topics and their sub posts. I had to zoom out to fit the entire page.
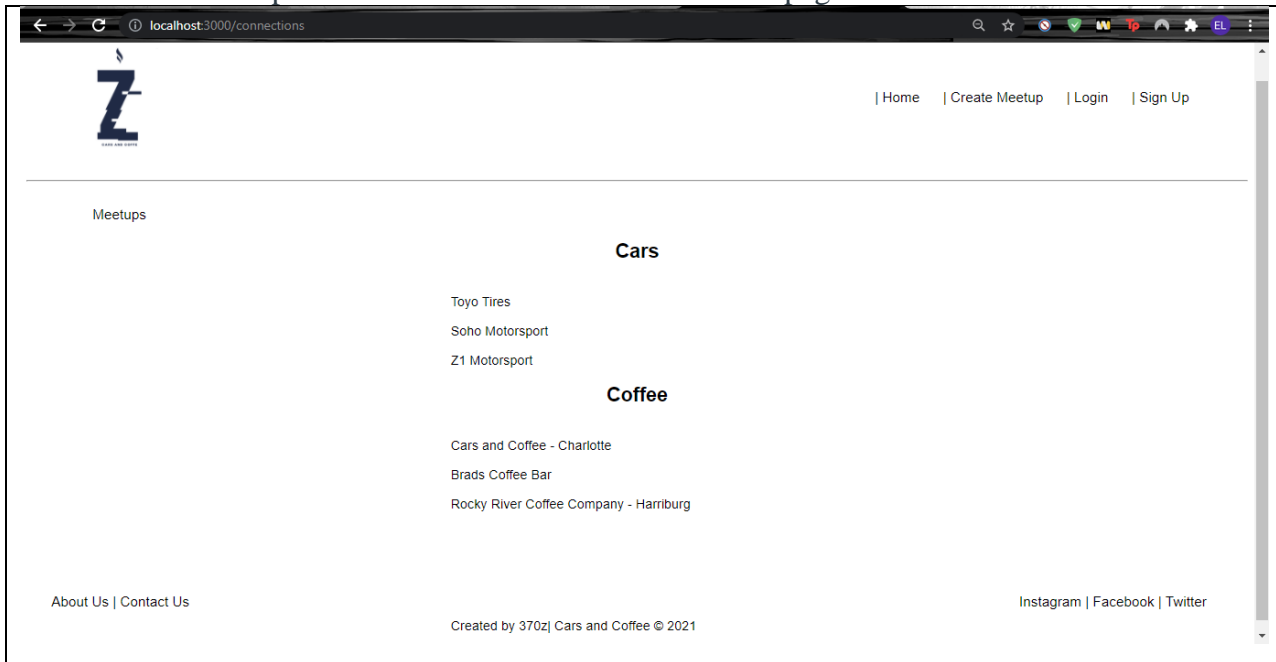

- This is my connections/61845e8a435fb487baba1b10 (Toyo Tires) page, if users click this page they will be able to see information about said post.
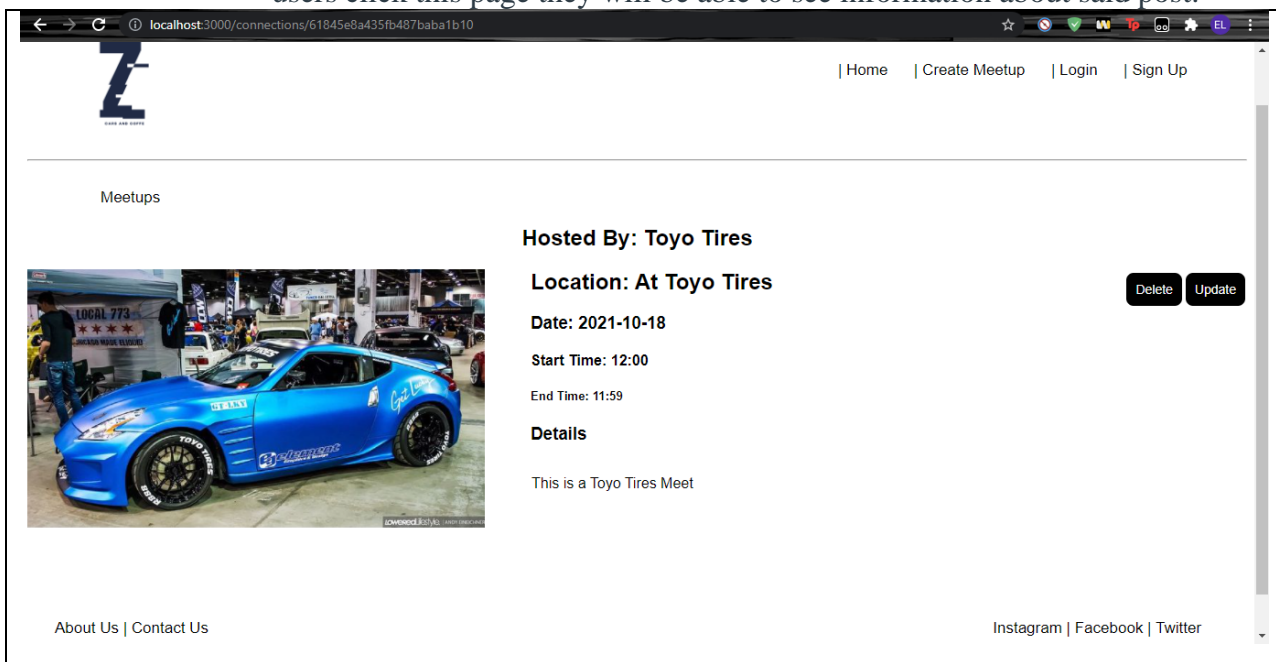

- This is my connections/61845e8a435fb487baba1b10 (Toyo Tires) page after user clicks update, when a user is done making changes they can click submit to save changes. I had to zoom out so nav bar and foot page is available to view if you scroll.

- This is my connections when there are no connections available to view.
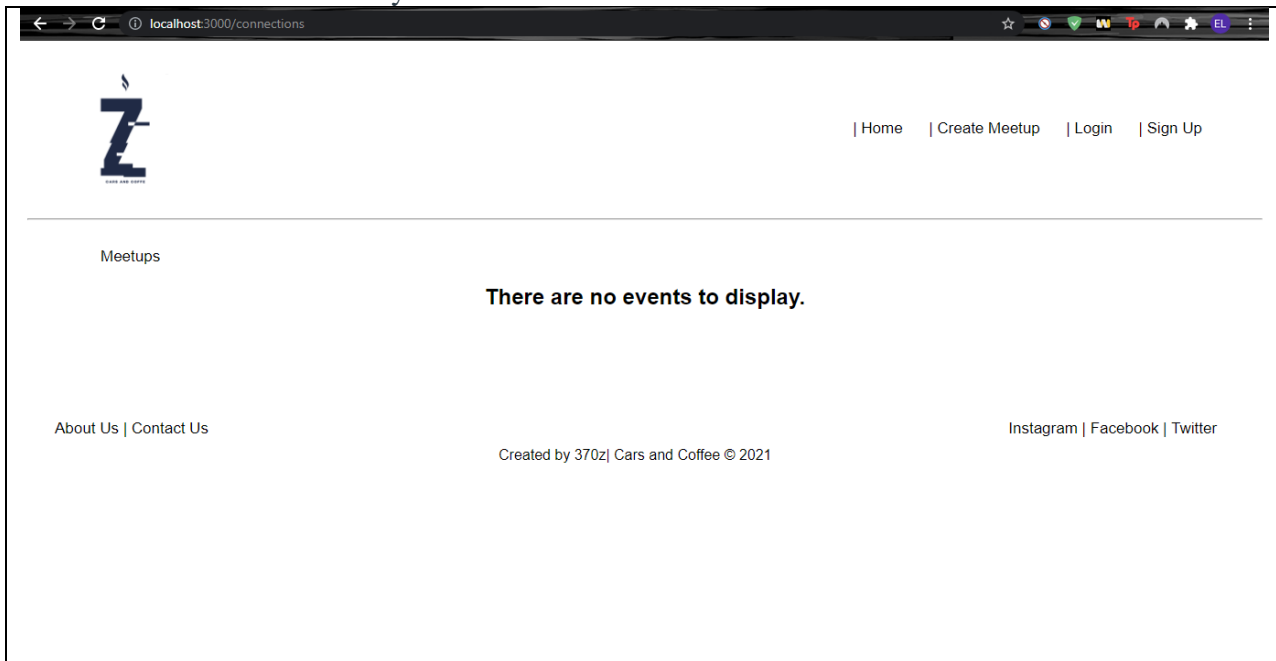

- This is my error handling when a user enters a page that doesn't exist or when the id is not 24bit.
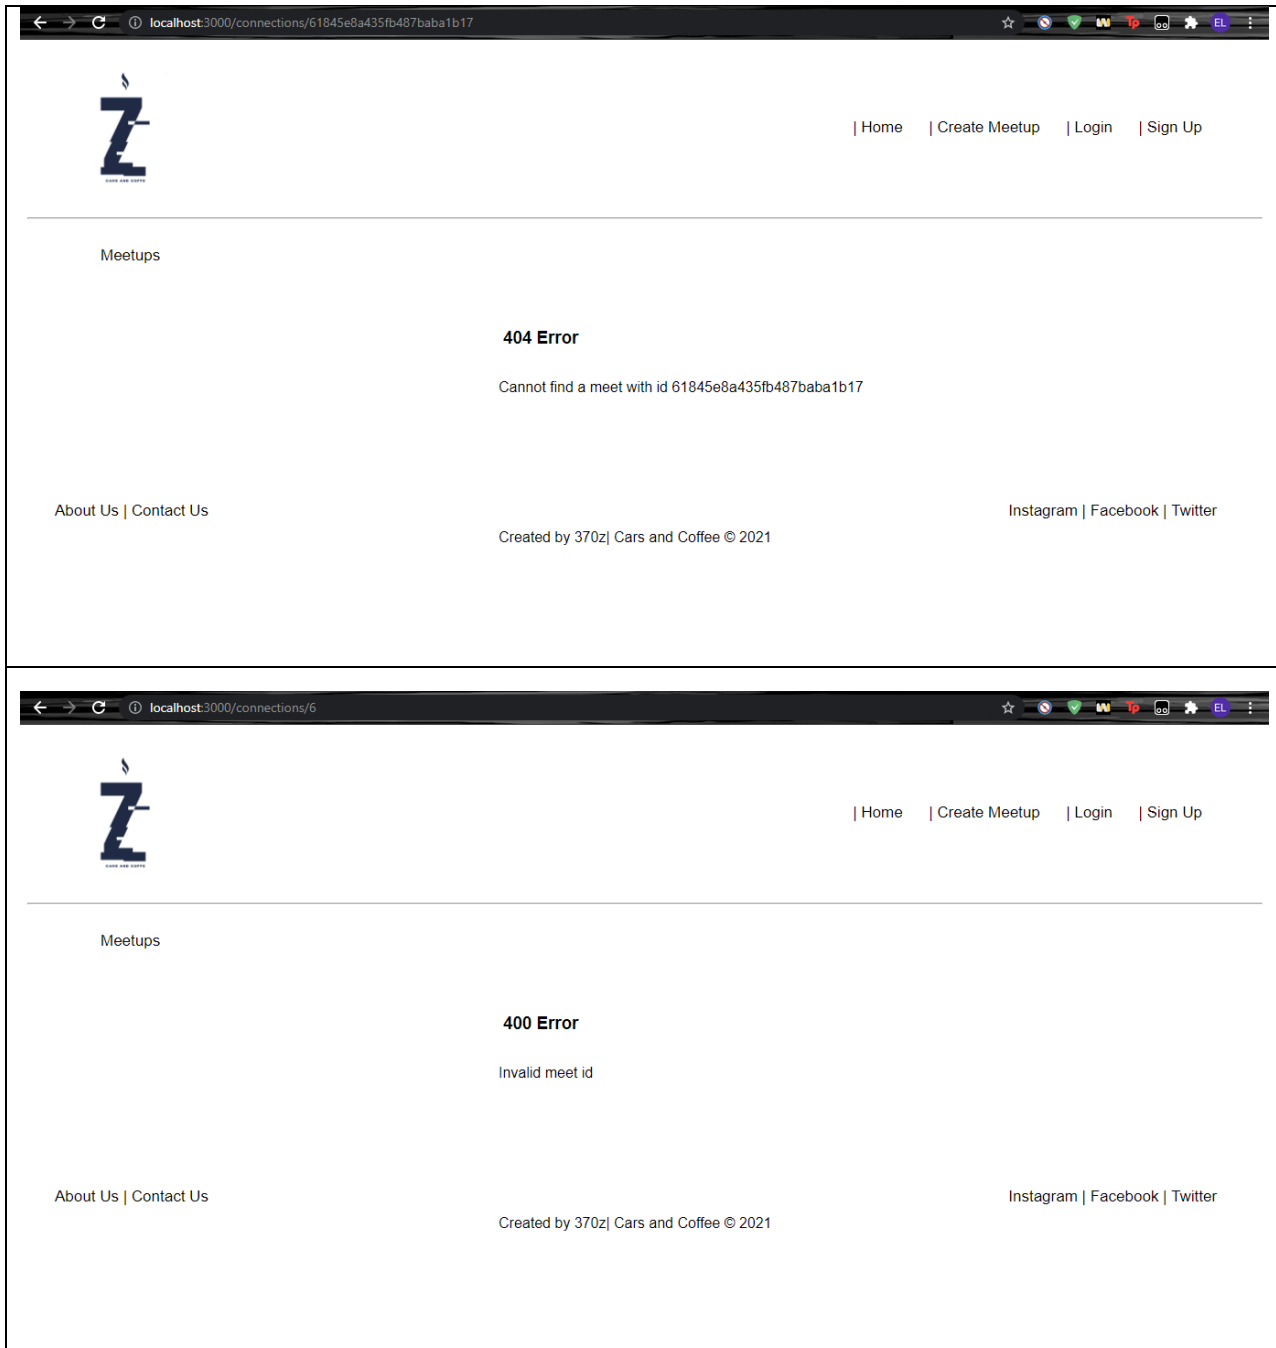

- This is my error handling when there is an internal error/ something wrong with code.

- This is my error handling when a user /connections/id that doesn't exist.

- This is my /about page.

About 370z| Cars and Coffee

Created to make friends and talk about about cars and show off cars at Car Meets.

There is also list of coffee places so that people can make friends while they drink coffee and talk about cars.

Cars and Coffee is about making friends and talking about cars and just enjoying life.

2. No additional features as of now, I plan to add some later on maybe make it look a little prettier.
3. Everything should be complete, project 3 is officially complete, and everything that was required should also be complete.
4. There was a lot of challenges I faced during project 3. For examples, I struggled to show all my connections from my Database because my getTopics method was not working properly. So, I

had to spend a lot of time to fix that method because I was still using terminologies that were not available in mongoose. So, everything had to be changed. I also had to do a lot of changes to my controller functions and implement promise. I struggled with that, but I eventually got everything to work.
